

Japanese tool documents

Tool in use on a concrete surface

Consider the application and tool together

This overview makes the Japanese EHWA construction documents easier to navigate for German- and English-speaking readers. The originals include SMART PADS and NON-SKID CUP. They remain labelled Japanese/English original versions; this overview explains the identifiable tool families.

This edited overview provides an introduction to the tool family. Complete original tables and illustrations remain accessible through the source links. You can move from the described operation directly to a technical discussion of your application.

Applications and tool assignment

Application or feature	Tool and assignment
SMART PADS	Pad product line in the Japanese documents
NON-SKID CUP	Tool designation in the original documents
Japanese product versions	Regional names and tables retained
Other construction tools	Compare with the shared construction/stone family

Tool features and benefits

The product presentation helps compare tool forms and surface-processing stages. Regional product names are retained so that questions can be identified clearly. Selection considers the desired surface, material and intended machine. Specialist documents can therefore serve as a starting point for a specific tool discussion.

From your application to a tooling solution

When enquiring, state the product name and original page. A photo of an existing tool can help identification. The regional document does not establish a general availability promise for Europe. Dimensions and connection are checked for the requested tool.

Start with the information already available. An existing tool, a photo or a drawing is often a useful starting point. Also discuss your goal: replacing an existing design, improving surface quality or reducing tool changes and machining time. Comparisons record quality, time and useful output together; missing information can be added during the technical discussion.
